

New Waste Solutions

From April 6th 2024

As the Welsh Government has implemented new regulations for rubbish disposal, we have made some changes which we believe will be beneficial for everyone.

WHAT HAS CHANGED ?

We have introduced the DMR bins to our packages

OUR SERVICE

What does this mean ?

- All of our bins will come with clear labels., making it as easy as possible to recycle as much as possible.
- We are working closely with various teams to ensure your waste/rubbish is disposed of correctly and recycled/reused as much as possible.

What can't go in to DMR bins ?

- The main one is **Glass**, if you do have any glass that we can recycle please keep this separate as we will collect this at no extra charge, but this will be recycled in a different place to the other DMR items.

Our ethos remains the same, with everyone's needs and requirements at the forefront while we work towards best operational practice .

Together we can find solutions to sustainability challenges, helping the film, television, media and events industries to reduce their carbon footprint and ensure much higher rates of reuse and recycling.

Please note: any cross contamination of recycling and waste streams (particularly food waste) will result in additional charges incurred.

Your assistance in meeting the new Welsh Government standards is appreciated ● ■ **ALBERT** Trained

Working closely with Albert and sustainability consultants
